LOUISIANA PROTECTION AND RESTORATION TECHNICAL REPORT
DRAFT - STAKEHOLDER APPENDIX

Introduction

The success of creating a comprehensive plan for hurricane risk reduction for the Louisiana Gulf Coast requires the input from multiple stakeholders, including local residents, business interests, non-governmental organizations, other Federal agencies, etc. The State of Louisiana and the U.S. Army Corps of Engineers (USACE), New Orleans District, set out to make the process of formulating a plan by creating the State's Master Plan for Coastal Protection and Restoration. The Master Plan was completed and, on May 30, 2007, approved by the Louisiana Legislature. The vision expressed within the Master Plan continues as the State and USACE work together on the Congressionally-authorized Louisiana Coastal Protection and Restoration (LACPR) effort. This technical evaluation will present a range of alternatives to the Administration, Congress, the State legislature, stakeholders and the public concerning risk reduction to people and assets, which includes the rebuilding of coastal wetland storm buffers.

Public involvement has been a critical component of LACPR and will continue to be as the process moves forward. This appendix summarizes the LACPR public participation efforts to date and identifies some of the scheduled future involvement and input opportunities. Additional stakeholder involvement related to the multi-criteria decision analysis process is described in the main report and the Risk-Informed Decision Framework Appendix.

LACPR Stakeholders

The purpose of the public involvement initiative is to inform and engage interested parties of progress on LACPR. The plan is directed toward citizens of the United States, the State of Louisiana, members of Congress, USACE partners, stakeholders and the media. The following is a list of stakeholders the LACPR team has contacted.

- Abbeville / Vermillion Chamber
- Alabama Coushatta Tribe of Texas
- All Congregations Together (ACT)
- American Shrimp Processors Association
- Amite River Basin Drainage & Water Conservation
- AmSouth Bank
- Anadarko Petroleum Corporation
- ANR Pipeline Company
- Apartment Association of Greater New Orleans
- Appachoe
- Archdiocese of New Orleans
- Ascension Parish
- Associated Branch Pilots
- Associated Federal Pilots and Docking Masters of LA
- Assumption Parish Government
- Atchafalaya Basin
- Atchafalaya River Company
- Audubon Nature Institute
- Avery Island, Inc.

Key Messages

Following are lists of the topics being presented to the public and stakeholders of LACPR:

LACPR

- As a result of the 2005 hurricane season's severity, Congress directed the Corps of Engineers, New Orleans District to produce a comprehensive Category 5 hurricane and storm damage risk reduction plan for coastal Louisiana, the LACPR Report.
 - The final report will identify, describe and proposes a full range of alternatives for flood control, coastal restoration and hurricane protection measures for coastal Louisiana.
- The Category 5 protective measure alternatives are contained in the LACPR report provided to Congress and all other pertinent decision-makers.
 - A Preliminary Technical Report was submitted June 2006.
 - A Progress Report was delivered to the Assistant Secretary of the Army for Civil Works in December 2007.
- The U.S. Army Corps of Engineers (USACE) and the State of Louisiana are working together to develop a comprehensive plan for reducing risk to coastal Louisiana from the effects of future Category 5 hurricanes.
 - Scientists and engineers from universities, private firms, environmental organizations, international groups, and State and Federal government agencies have come together to work on this vital effort.
 - The USACE is coordinating this effort with the State's Coastal Protection and Restoration Authority, which oversees hurricane risk reduction and coastal restoration activities.
 - The USACE and the LACPR team have made a concerted effort to use the best available scientific and engineering information and to work closely with its partners and the public.
- Reducing risk to Louisiana's citizens, natural resources and industries from the effects of hurricanes and other natural disasters is an integral part of the USACE's mission.
 - The LACPR team realizes that the first line of defense against storm damage effects is Louisiana's coastal ecological features, including barrier islands, marshes, ridges, and coastal forests.
 - The USACE has completed emergency repairs to 169 miles of levees and floodwalls damaged during Hurricane Katrina, restoring the hurricane damage risk reduction system to Congressionally-authorized pre-disaster condition.

LOUISIANA PROTECTION AND RESTORATION TECHNICAL REPORT
DRAFT - STAKEHOLDER APPENDIX

- Louisiana citizens are a vital part of the restoration process. Everyone makes a difference.
 - Building a strong structural hurricane risk reduction system, including levees and other barrier structures, coupled with a restored and sustainable coastal ecosystem, offers the best opportunity for success to save and protect coastal Louisiana's citizens and economy.
 - Plan to attend upcoming public meetings to learn more about the decisions involved in designing, building, and maintaining a comprehensive Category 5 protective system.
 - Provide your own ideas on protective systems. These ideas may be contained in the final LACPR report.
 - Get involved. Check out www.lacpr.usace.army.mil to read the LACPR Preliminary Technical Report and Plan Formulation Atlas, find out more about upcoming public meetings, and to provide your input.

MRGO

- MRGO is a component of LACPR as required in the Congressional authority. The developed MRGO plan is to be fully consistent and integrated with LACPR.
- A preliminary report was sent to Congress in December 2006.
- The integrated Final Report and Legislative Environmental Impact Statement was sent to the Chief of Engineers in November of 2007 and forwarded to the Assistant Secretary of Army for Civil Works in January of 2008.
- In terms of flood damage reduction, preliminary findings on MRGO do not show any significant link between the channel and storm surge during significant hurricane events.
- The recommended plan provides total closure of the channel (versus phased closure over time). In addition, it eliminates the possibility of inbound and outbound navigation traffic on the MRGO (although smaller vessels would still be able to use other area waterways). It is the most acceptable plan to the public, landowners, various non-governmental organizations and local parishes. It is also the most environmentally acceptable plan.
 - The decision was based on the effects to the environment, economic impact and benefits to other coastal plans.
 - The decision yields most environmental benefits
 - could prevent the loss of up to 2,375 net acres of marsh over 50 years
 - salinity reduction and vegetation change to historic habitat types is anticipated over a larger area as compared to other alternatives
- The Corps team evaluated alternatives taking into account environmental, hurricane protection and economic factors.

LOUISIANA PROTECTION AND RESTORATION TECHNICAL REPORT
DRAFT - STAKEHOLDER APPENDIX

- The Corps will continue to work closely and communicate frequently with its stakeholders, partners and the public, providing information regarding the final report and project status.

List of Stakeholder Activities

The following table presents a list of stakeholder interactions since completion of the Preliminary Technical Report. The list of public outreach activities from December 2005 to June 2006 is included as an enclosure to the LACPR Preliminary Technical Report.
